## Overview

Flexible braids for continuous current, grounding and bonding applications (i.e., cable tray)

Standard construction using 30 AWG individual wires is suitable for medium-duty applications. If needed, all constructions and/or configurations in this section can be supplied using 36 AWG wire for extra flexibility.

### **Rating of the connectors**

It is important to note that the ampere ratings in this section are suggested for use as a reference only. If needed, we can certify ampacity of all connectors in our top-of-the-line automatic heat cycle laboratory using CEI60694 standards. The performance certificate gives you the assurance that our connectors are suitable for your application. Actual values used for a given application will depend on such factors as temperature rise, number of braids, voltage ratings and other conditions of service that need to be verified by application engineers.

### **Ferrules and plating**

Ferrules are made of high-conductivity seamless 99.9% pure copper that are electro-tin plated prior to forming on each end of the assembly. This procedure is important to eliminate surface corrosion between the inside of the ferrule and the braids before compression can affect the connector's performance.

For increased pad conductivity, 30, 50 or 100 micron silver-plated ferrules are available. Nickel plating or bare copper also available upon request.

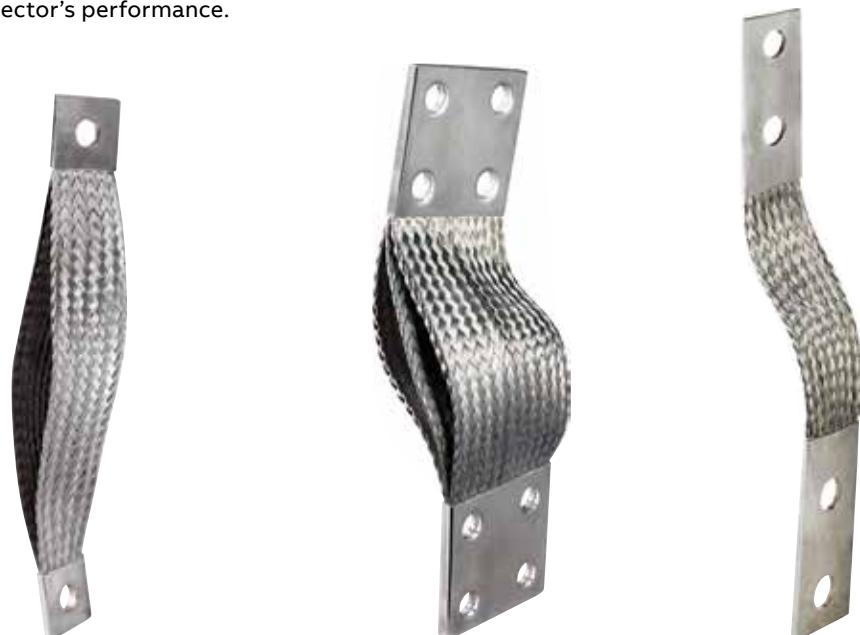

### **Length of the assemblies**

All braid lengths are measured in inches and are measured from end to end. The last digits of the cat. no. determine the length of the connector (i.e., FBD12, "12" = 12 in.).

### **Options**

For special requests, provide a copy of your drawing with your specific requirements so we can design and build the flexible connectors to your exact specifications.

If needed, a wide range of insulation products is available depending on the application, voltage and temperature ratings.

## Technical specifications

### Technical specifications

Configuration	Type	Ind. wire gauge size (AWG)	Width range (in.)	Rating range (amperes)	Comments
<b>Extra-flexible links for heavy-duty application</b>					
	FBEXA	36	1½–1¾	350–1,000	Extra-flexible 1-hole NEMA Boreal's top of the line
	FBEXB	36	1½–1¾	400–2,000	Extra-flexible 2-hole NEMA Boreal's top of the line
	FBEXG	36	1¾–2	900–1,650	Extra-flexible transformer link
	FBEXH	36	3–4	1,400–4,000*	Extra-flexible 4-hole NEMA Boreal's top of the line
	FBEXJ	36	3¼–3¾	2,300–3,600*	Extra-flexible 90° 4-hole NEMA Boreal's top of the line
<b>Standard flexible links for medium-duty application</b>					
	FBB**-1 FBC**-1 FBD**-1	30	1¼–1¾	350–1,000	NEMA std. grounding connectors
	FBD** FB2D**	30	1½–1¾	400–2,000	Same as FBEXB with 30 AWG wires
	FB3D** FBXD** FB2XD**	30	1½–2	700–1,750	Standard transformer link
	FBSWB	30	1½–2	700–1,750	Same construction as SWB with different hole pattern
	FBSWC	30	3	1,300–2,350	4 hole pads also available in wider configuration, refer to EXH, SWD and LTL series
	FBSWC	30	3	1,300–2,350	Same construction as SWC Type A with different hole configuration
	FBSWC	30	3	1,300–2,350	Same construction as SWC Type A with different hole configuration
	FBSWC	30	3	1,300–2,350	Same construction as SWC Type A with different hole configuration

\* For ampacity over 2,500 please contact your inside sale representative

\*\* Specify desired length.

FB3E12	504,000	700
FB4E12	672,000	805
FBF12	230,400	360
FB2F12	460,800	600
FB3F12	691,200	820
FB4F12	921,600	1,000
FBG12	307,200	415
FB2G12	614,400	700
FB3G12	921,600	760
FB4G12	1,228,800	1,200

### Grounding and bonding information

#### Minimum size conductors for bonding raceways and equipment

Rating or setting of overcurrent device in circuit ahead of equipment, conduit, etc. not exceeding amperes	Copper wire circular mils
200	26,240 (6 AWG)
300	41,740 (4 AWG)
400	52,620 (3 AWG)
500	66,360 (2 AWG)
600	83,690 (1 AWG)
800	105,600 (1/0)
1,000	133,100 (2/0)
1,200	167,800 (3/0)
1,600	211,600 (4/0)
2,000	250,000
2,500	350,000
3,000	400,000
4,000	500,000
5,000	700,000
6,000	800,000

Based on table 16 CEC

#### Minimum size of bare copper grounding conductor

Maximum available short circuit current amperes	Maximum fault duration with exothermic weld, compression or bolted joint	
	0.5 second circular mils	1.0 second circular mils
5,000	26,240	41,740
10,000	52,620	83,690
15,000	83,690	105,600
20,000	105,600	167,800
25,000	133,100	211,600
35,000	211,600	250,000
40,000	211,600	300,000
50,000	250,000	350,000
60,000	30,000	500,000
70,000	350,000	600,000
80,000	400,000	600,000
90,000	500,000	700,000
100,000	500,000	700,000

Based on table 51 CEC  
Size calculated in accordance with IEEE No. 80.

## EXA series

36 AWG individual strand

### Description:

1-hole NEMA, extra-flexible braided connectors using 36 AWG individual wires in braid construction for extra flexibility. These connectors are made with tin- or silver-plated high-conductivity 99.9% pure copper ferrules formed on each end. Individual wires used in braid are tinned prior to weaving so that maximum protection from corrosion is provided.

### Ordering information:

**Length:** Standard total lengths are 304 mm (12 in.).

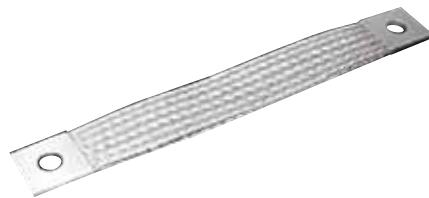

If different lengths are required, add your desired length in millimeters at the end of the part number.

Ex.: EXA050A1406 (for 16 in. long)

**Plating:** Standard ferrules are electro-tin plated. Other options are available; please refer to page D4.

### Application:

These highly flexible connectors are suitable wherever it is necessary to take up expansion, severe vibration and/or misalignment when connecting transformers, switchgear, generators or busbars.

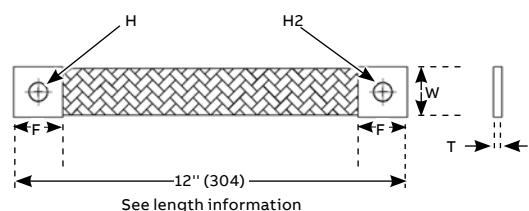

### Extra-flexible connectors – 1-hole NEMA standard

## EXG series

36 AWG individual strand

### Description:

3/2-hole NEMA, extra-flexible braided connectors using 36 AWG individual wires in braid construction for extra flexibility. These connectors are made with tin- or silver-plated high-conductivity 99.9% pure copper ferrules formed on each end. Individual wires used in braid are tinned prior to weaving so that maximum protection from corrosion is provided.

### Ordering information:

**Length:** Standard total lengths are 304 mm (12 in.).

If different lengths are required, add your desired length in millimeters at the end of the part number.

Ex.: EXG140A1406 (for 16 in. long)

**Plating:** Standard ferrules are electro-tin plated.

Other options are available; please refer to page D4.

### Application:

These highly flexible connectors are suitable wherever it is necessary to take up expansion, severe vibration and/or misalignment when connecting transformers, switchgear, generators or busbars.

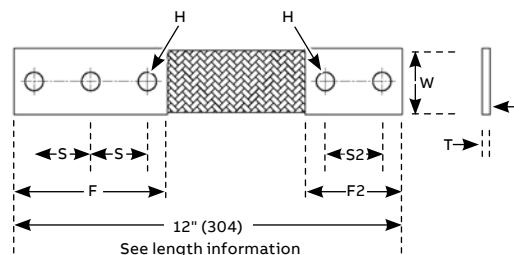

### Extra-flexible connectors – 3/2-hole NEMA standard

### Diagram

## EXH series

36 AWG individual strand

### Description:

4-hole NEMA, extra-flexible braided connectors using 36 AWG individual wires in braid construction for extra flexibility. These connectors are made with tin- or silver-plated high-conductivity seamless 99.9% pure copper ferrules formed on each end. Individual wires used in braid are tinned prior to weaving so that maximum protection from corrosion is provided.

### Ordering information:

**Length:** Standard total lengths are 304 mm (12 in.).

If different lengths are required, add your desired length in millimeters at the end of the part number.

Ex.: EXH150A1406 (for 16 in. long)

**Plating:** Standard ferrules are electro-tin plated. Other options are available; please refer to page D4.

### Application:

These highly flexible connectors are suitable wherever it is necessary to take up expansion, severe vibration and/or misalignment when connecting transformers, switchgear, generators or busbars.

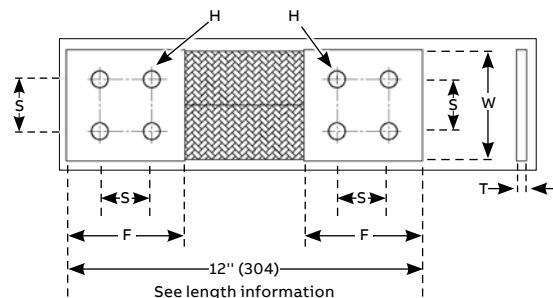

### Extra-flexible connectors – 4-hole NEMA standard

## SWC series

30 AWG individual strand

### Ordering information:

**Length:** Standard total lengths are 304 mm (12 in.). If different lengths are required, add your desired length in millimeters at the end of the part number.  
Ex.: SWC130J1406 (for 16 in. long)

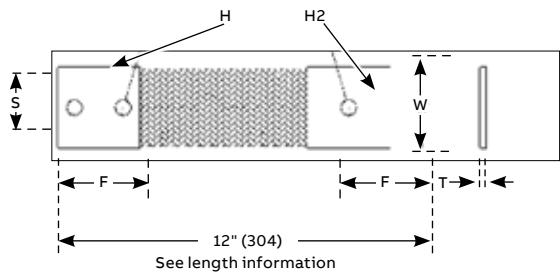

**Plating:** Standard ferrules are electro-tin plated. Other options are available; please refer to page D4.

### Standard flexible connectors – 2/1-hole NEMA standard

Cat. no.	*Ampacity $\Delta$ 65 °C	W in. (mm)	F in. (mm)	S in. (mm)	H in. (mm)	H2 in. (mm)	T in. (mm)	Weight lb (g)

### Ordering information:

**Length:** Standard total lengths are 457 mm (18 in.). If different lengths are required, add your desired length in millimeters at the end of the part number.  
Ex.: LTL250A1610 (for 24 in. long)

**Plating:** Standard ferrules are electro-tin plated. Other options are available; please refer to page D4.

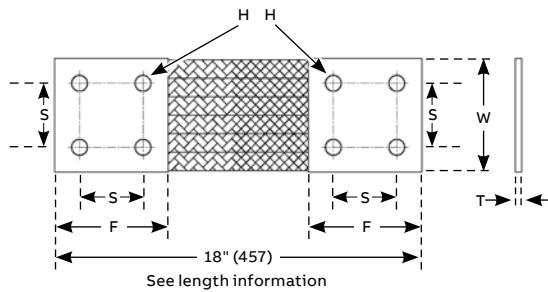

### Standard flexible connectors – 4/4-hole

## Flat braided copper cables

### Conductors

Strands are soft-drawn bare or tinned copper.

### Construction

Strands are woven into a tubular braid and rolled flat.

### Application

For bonding, grounding or connecting moving parts.

### Specification

ASTM-B33

### Assemblies

Factory-installed molded connectors also available.

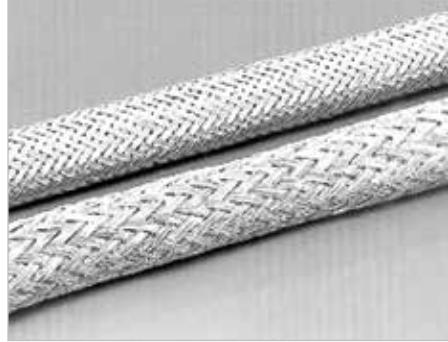

The following listing represents the most popular flat braid constructions used in specialized electrical industry applications. For other constructions, contact an ABB sales representative or your regional ABB sales office.

Cat. no.	AWG size	Circular mil area	Numbers and size of wires (AWG)	Construction	Nominal width (in.)	Nominal thick. (in.)	Approx. weight (lb/m)

\* The suffix «-1 denotes tinned copper braid. For bare copper braid, replace «-1 with «-2».

NOTE: Dimensions shown are only approximate due to the extreme flexibility of braided cables.

## Tinned copper tubular braids

### Conductors

Strands are soft-drawn bare or tinned copper.

### Construction

Strands are woven into a tubular braid.

### Application

For bonding, grounding or connecting moving parts.

### Specification

ASTM-B33, QQ-B-375

### Shield coverage

Braid is formed to maintain coverages of 90% shielding over the nominal diameters specified.

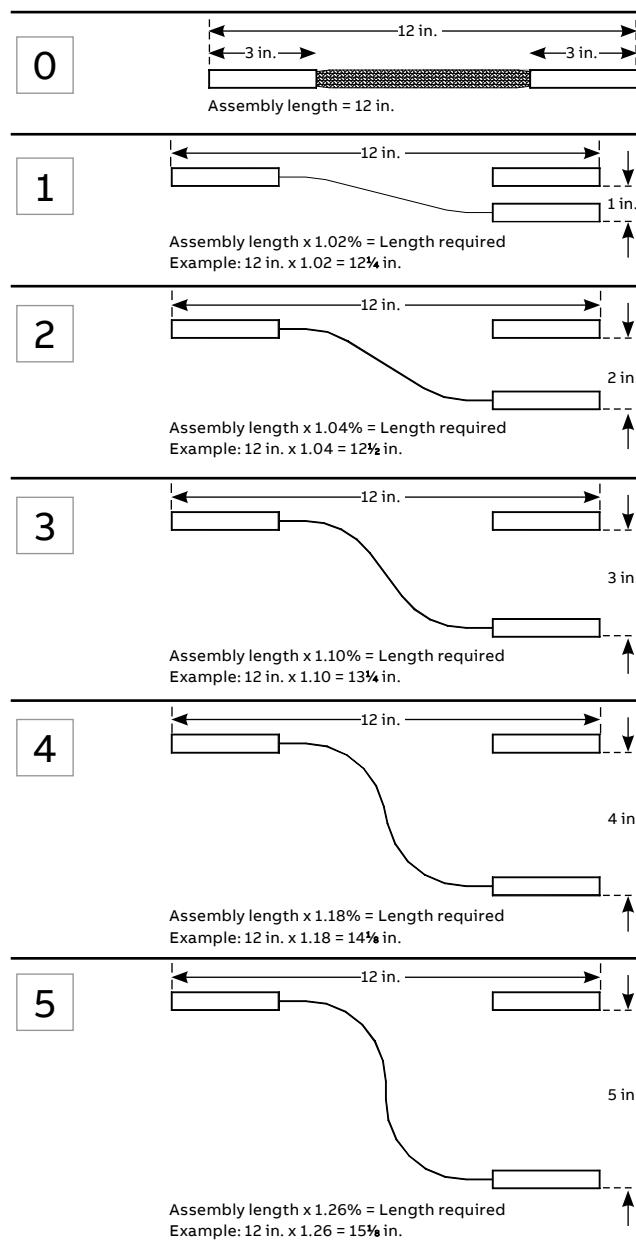

The following listing represents the most popular tubular braid constructions used in today's electrical and electronic industries. For other constructions, contact an ABB sales representative or your regional sales office.

Cat. no.	Nominal I.D. when rounded (in.)	Nominal circular mil area	AWG size equivalent	Number and size of wires (AWG)	Construction	Approx. weight (lb /m)
TB - 481630	2 $\frac{1}{4}$	77,180	1	768 / 30	48 x 16 / 30	260
TB - 481430*	2	67,540	2	672 / 30	48 x 14 / 30	230
TB - 481230*	1 $\frac{1}{2}$	57,890	3	576 / 30	48 x 12 / 30	200
TB - 481130*	1 $\frac{3}{8}$	53,060	3	528 / 30	48 x 11 / 30	185
TB - 481030	1 $\frac{1}{4}$	48,240	3	480 / 30	48 x 10 / 30	168
TB - 480930*	1 $\frac{1}{8}$	43,420	4	432 / 30	48 x 9 / 30	155
TB - 480830*	1	38,600	4	384 / 30	48 x 8 / 30	140
TB - 480730*	7/8	33,770	5	336 / 30	48 x 7 / 30	123
TB - 481234	13/16	22,896	7	576 / 34	48 x 12 / 34	85
TB - 481836*	25/32	21,600	7	864 / 36	48 x 18 / 36	79
TB - 480734*	1/2	13,356	9	336 / 34	48 x 7 / 34	53
TB - 481136*	1/2	13,200	9	528 / 36	48 x 11 / 36	53
TB - 240730*	3/8	16,880	8	168 / 30	24 x 7 / 30	62
TB - 480836*	3/8	9,600	10	384 / 36	48 x 8 / 36	40
TB - 240834	3/8	7,632	11	192 / 34	24 x 8 / 34	30
TB - 241336*	13/64	7,800	11	312 / 36	24 x 13 / 36	31
TB - 240734	1/4	6,678	12	168 / 34	24 x 7 / 34	26
TB - 240536*	1/8	3,000	15	120 / 36	24 x 5 / 36	13
TB - 240436*	7/64	2,400	16	96 / 36	24 x 4 / 36	11

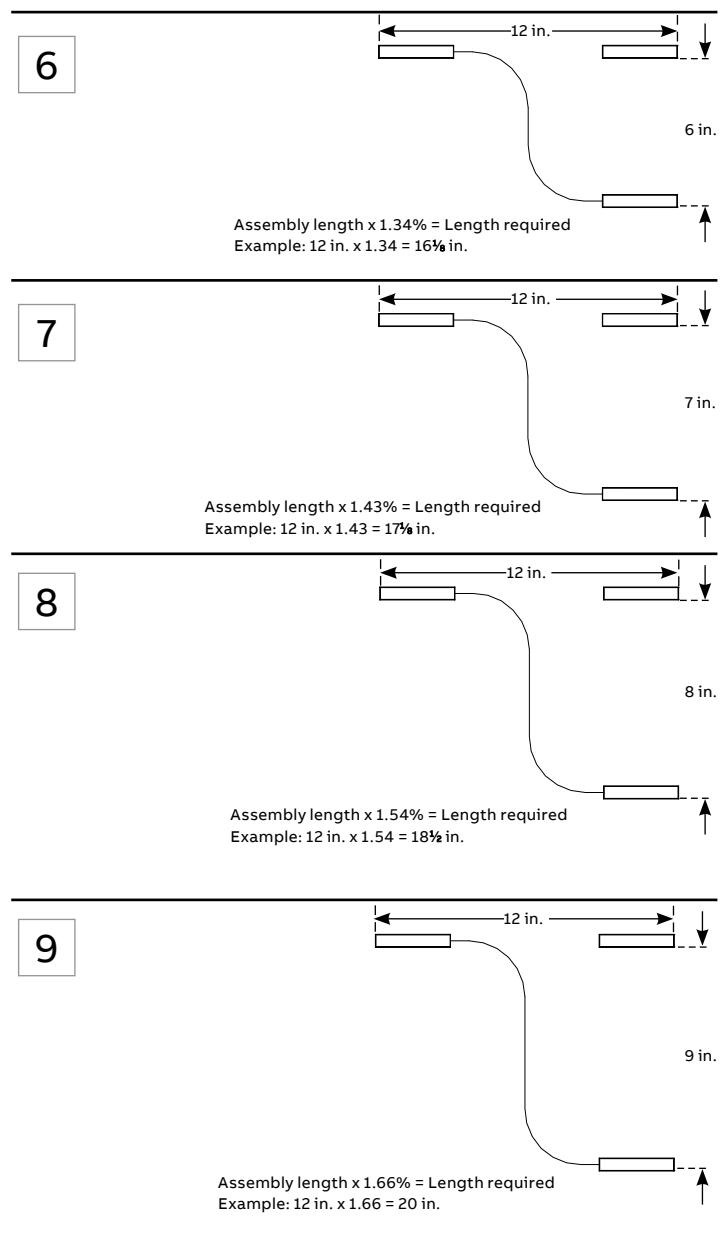

\* Denotes QQ-B-575 construction.

NOTE: Because tubular braid is very pliable, the I.D. dimensions are approximate.

## Offset calculation guide

**IMPORTANT:** This offset calculation guide should be used as a reference only and represents a minimum percentage to be added depending on the offset dimension between two connecting points. A higher percentage might be necessary depending on the size and/or flexibility of the assembly.
